

Carbon Reduction Plan

Supplier name: Sysco GB

Publication date: September 2023

Commitment to achieving Net Zero

Sysco GB is committed to achieving Net Zero emissions by 2050. Fresh Direct (UK) Limited is a wholly owned subsidiary of Brake Bros Limited, which in turn is a wholly owned subsidiary of Sysco Corp. Sysco GB is currently the collective name for Sysco companies based in Great Britain, comprising Fresh Direct (UK) Limited, Brake Bros Limited, Kent Frozen Foods Limited and Medina Quay Meats Limited.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2019	
Additional Details relating to the Baseline Emissions calculations.	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	73,102
Scope 2	16,804
Scope 3 (Included Sources)	-
Total Emissions	89,907

Current Emissions Reporting

Reporting Year: 2022	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	64,044
Scope 2	13,283
Scope 3 (Included Sources)	-
Total Emissions	77,327

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We have a global SBTi target of 27.5% reduction in Scope 1 and 2 emissions as well as a target of 100% renewable energy by 2030.

Our Scope 3 emissions target globally is to work with suppliers representing 67% of emissions to set science-based targets by 2026.

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

We continue to closely monitor and manage energy consumption in line with our Energy Management System ISO50001, which the majority of our UK operations are accredited to. In addition, our LED lighting installation programme has now finished in all warehouses.

We have also undertaken upgrades to loading bays at numerous sites, these include insulated dock surrounds to keep better temperature control.

During the reporting period, over 22% of our electricity was procured from renewable sources, and we have also installed two 1MW solar arrays on the roof of our sites, creating green/clean electric with a plan to install more in the coming years. In comparison with the previous year, we have seen an overall increase of 17% in emissions due to increased business activity as we rebound from the impacts of Covid-19, however this is still a 14% decrease from 2019-20. Analysis of the emission intensity reflects this, reducing from 53.1 to 35.8tCO₂e/£m for the current year. This is also a reduction of just over 20% in intensity compared to 2019-20.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

Peter Owen (Engineering, Environment and Property Director)
